# A Business Model Overview — Tasty Merge

- Revenue model: **IAP ~70%** + **IAA ~30%** (rewarded video)
- All ads are **rewarded video** — players actively choose to watch in exchange for rewards; **no** interstitials or banners, ads never interrupt the experience
- Direction:** gradually shifting toward Flambé's business model (IAP as the main revenue driver, energy as a progress gate, tiered escalating packages) — **expanding shop packages and events centered around energy**, while keeping all existing rewarded ad placements

## MONETIZE LOOP – DEMAND CHAIN TRIANGLE

At any given time window, one of the three factors is pushed into imbalance — depleted energy, congested board, or accumulated cooldowns. That imbalance triggers demand for the next factor in the loop, creating a continuous demand chain.

## STRATEGIC POSITIONING

## MARKET – FLAMBÉ & TOP MERGE GAMES

### Pure IAP · late monetization

- **Pure IAP** model — 0 ads
- Focus monetization on users from **d60–d90+**
- Heavy event / live ops to retain high-LTV payers
- Ads removed entirely to avoid diluting payer LTV

VS

## TASTY MERGE – HYBRID MODEL

### IAP 70% + IAA 30% · early monetization

- Rewarded ads active **from day 1** — bridge revenue from non-payers in early phase
- Does not wait for d60–d90+ to generate ad revenue
- Post-CPI test: **low CPI** → **stronger case to push IAA higher**
- Post-stabilization: possible **A/B test interstitial ads** by segment if CPI allows

| Revenue Axis                   | Status                          | Role                                                         |
|--------------------------------|---------------------------------|--------------------------------------------------------------|
| Rewarded Video (IAA)           | Active — all current placements | Lets non-payers progress + lever for shop package discounts  |
| IAP (gems, energy, pack, pass) | Active — main axis              | Primary revenue from payers; to be deepened following Flambé |
| Interstitial Ads               | Not active — A/B test later     | Reserve: test by segment post-stabilization if CPI allows    |
| Banner / MRec                  | Not used                        | —                                                            |

## B Current Ad Placements

All placements below are **rewarded video** — players tap to watch and receive rewards.  
No forced ads.

| #  | Feature / Screen                                | Player Receives                              | Frequency                        |
|----|-------------------------------------------------|----------------------------------------------|----------------------------------|
| 1  | <b>Daily Reward</b> — double login reward       | ×2 daily reward                              | 1×/day                           |
| 2  | <b>Energy Refill</b> (Buy Currency)             | Energy                                       | Multiple times/session           |
| 3  | <b>Video Bonuses</b> — video reward popup       | Ingredients / items                          | Multiple times/day               |
| 4  | <b>Daily Shop Refresh</b>                       | Refresh daily deal packages                  | 1×/day                           |
| 5  | <b>Recharge Generator</b> — skip cooldown       | Skip cooldown, generator produces next item  | Multiple times in gameplay       |
| 6  | <b>Skip Cooking</b> — skip cooking timer        | Complete cooking instantly                   | Multiple times in gameplay       |
| 7  | <b>Happiness Express</b> — energy package offer | Energy + bonus rewards                       | Time-gated offer                 |
| 8  | <b>Open Star Chest</b>                          | Chest reward                                 | Per unlock                       |
| 9  | <b>Cooldown Chest</b> — skip chest cooldown     | Skip chest cooldown                          | Per unlock                       |
| 10 | <b>Cooldown-to-Open Item</b> — early item open  | Open item, skip wait                         | Per unlock                       |
| 11 | <b>Shop Discount Packages via Ads</b>           | Purchase packages at discounted / half price | Per package type (see Section C) |

Rewarded placements fall into 3 groups: **(1) resource boost** (energy, gifts), **(2) skip wait times** (cooking, generator, chest, item), **(3) shop package discounts**. A few reserve placements are not yet active.

# Shop Packages & Transition Roadmap

## C.1 Current — merge-cooking model

Shop packages built to merge-cooking genre standards. Each package purchased via IAP; packages marked  **ads** can also be unlocked or discounted via rewarded ad.

| Group                   | Package                     | What it sells / Mechanism                                     |
|-------------------------|-----------------------------|---------------------------------------------------------------|
| Currency & Resources    | Gem Pack                    | Gems (hard currency), multiple price tiers                    |
|                         | Discount Gem Raw            | Discounted gems, time-limited                                 |
|                         | Energy Pack                 | Energy, single purchase                                       |
|                         | Energy Trilogy              | Bundle of 3 energy packages in tiers                          |
| Combo / Special Bundles | First Purchase Pack         | First-buy — one-time, high value                              |
|                         | Luxurious Offer             | Premium (gems + exclusive items)                              |
|                         | Standard Diamond            | Standard diamond package                                      |
|                         | Bundle Pack / Bundle Offer  | Resource combo                                                |
|                         | Supply Chest Pack           | High-value resource supply chest                              |
|                         | Nice Boost Pack             | Booster + resources                                           |
| New Players             | Starter Pack                | Starter — time-limited after account creation                 |
|                         | Opening Pack                | Package unlocked upon completing a scene                      |
| Pass / Subscription     | Weekly Pass — Silver & Gold | Weekly reward, 2 tiers                                        |
|                         | Infinity Pack               | "Unlimited" — generates resources continuously for set period |
| Progress / Time-based   | Piggy Bank                  | Accumulates in-game points, opened with one purchase          |
|                         | Speed Package               | Speed boost + resources, time-limited                         |

| Group           | Package                    | What it sells / Mechanism               |
|-----------------|----------------------------|-----------------------------------------|
| Rotating Offers | Chain Pack                 | Accumulates rewards over multiple days  |
|                 | Daily Deals Pack (1, 2)    | Daily deals, refreshable via ads        |
|                 | Daily Offer 1              | Personalized daily offer                |
|                 | Happiness Express<br>★ ads | In-game offer, costs energy to activate |
| Free            | Daily Free Rewards         | Daily free gifts, integrated in shop    |

### C.2 Direction — transitioning toward Flambé's business model

CURRENT

Business model Tasty Merge

- Genre-standard package portfolio for merge-cooking
- Parallel revenue model: IAP + rewarded ads
- No interstitial, banner, or remove-ads placements

→

DIRECTION

Business model Flambé

- Shift IAP to the **primary revenue driver**; expand catalog depth
- Develop tiered **Energy & Gem** package lines with escalating price points, released in waves
- Number packages by season and event to drive purchase cycles and scarcity
- Use Energy as a paced progression gate
- Maintain all existing rewarded ad placements**
- Evaluate **interstitial ad** A/B testing by player segment post-stabilization, subject to favorable CPI conditions

### C.3 Direct Comparison with Flambé

| Axis                | Tasty Merge                                      | Flambé                         | Assessment                                               |
|---------------------|--------------------------------------------------|--------------------------------|----------------------------------------------------------|
| Business model      | IAP + IAA hybrid (transitioning to Flambé-style) | Pure IAP, 0 ads                | Tasty Merge retains revenue from non-payers via rewarded |
| Monetization timing | Day 1 — IAA + IAP in parallel                    | d60–d90+ via events / live ops | Tasty Merge generates revenue                            |

| Axis                   | Tasty Merge                                          | Flambé                           | Assessment                                                                        |
|------------------------|------------------------------------------------------|----------------------------------|-----------------------------------------------------------------------------------|
|                        |                                                      |                                  | earlier, less dependent on long retention                                         |
| Package system         | Merge-cooking model → <b>transitioning to Flambé</b> | IAP-centric, escalating packages | Roadmap converging toward Flambé's IAP depth                                      |
| Rewarded ad for energy | Yes                                                  | No                               | Tasty Merge more player-friendly for non-payers                                   |
| Ad to skip timer       | Yes — multiple placements                            | No                               | Tasty Merge lets players skip waits; Flambé uses wait timers as spending pressure |
| Interstitial / banner  | Not active — A/B test later                          | No                               | Tasty Merge may activate by segment if CPI allows                                 |
| Energy                 | 1/2min · cap 100 · ~3h20m                            | 1/2min · cap 100 · ~3h20m        | Same as Flambé — matches genre standard                                           |

Key difference: Flambé eliminates all ads and waits until d60–d90+ to monetize via IAP + live ops. Tasty Merge chooses a hybrid model — **monetizing earlier via IAA (30%)**, keeping rewarded ads, and potentially layering in interstitial ads by segment as the game matures. Low CPI from Android/iOS test phase further validates pushing IAA higher.
